## DETAILED ACTION

### NOTE TO APPLICANT:

**Group I claim 1-5 which incorrectly numbered, and should be designated as claims 1-4.**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Tolhoff et al '394. Tolhoff et al teach a catheter which is structurally similar to the Applicant's claimed needle. The intended use of the Applicant's needle is not given patentable weight. The Applicant's attention is directed to Figures 4 and 5. The needle of Tolhoff et al is beveled and includes a solid tip. Further, a radial opening adjacent the tip for delivery of fluids is provided. The needle is a titanium tipped needle.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tolhoff et al. Tolhoff et al do not discuss the specific angle nor the gauge of the needle.

Regarding claim 3, by way of extrapolating lines, the angle of the bevel of Tolhoff et al is generally in the range of 20 to 45 degrees. In addition, to modify the angle would have been obvious to a person of ordinary skill in the art at the time the invention was made depending desired damage and discomfort to the object being punctured. Lastly, the specific gauge chosen is believed to be an obvious matter of choice in mechanical design to one of ordinary skill in the art at the time the invention was made depending on the strength of the object being punctured.

### ***Conclusion***

Summary: Claims 1-4 are rejected, while claims 5-8 are directed to non-elected claims that were subject to a restriction.
